Trans. of Sudostroyeniye (USSR) 1957 [v. 23] no. 8, p. 24-29.

A method is developed calculating profile losses in marine turbines with trailing edges of finite thickness for flow velocities up to the speed of sound. The investigation is based on Lotzysanski's method of calculation in which the relationship between the boundary layers on leaving the lattice and at the trailing edges is obtained by generalizing experimental data relating to individual blade profiles with thin outlet edges (for flow velocities up to the speed of sound).
